Kevin George

Backend Software Engineer | Java, Spring Boot, Microservices, Cloud | AI-native workflow

Hannover, Germany | techatkevin@gmail.com | linkedin.com/in/kevin-george123 | github.com/kevin123george

SUMMARY

Backend software engineer with 7 years in industry across India and Germany: about 4 years full-time, now at TomTom, plus 2.5 years as a working student. Specialized in Java/Spring Boot microservices, event-driven systems and cloud platforms (AWS, GCP, Azure), with SRE and data-analysis experience at Amazon scale. I work AI-native: I direct and review Claude Code agents with defined roles, review gates and written decision records, and I own the architecture, quality and operation of what ships.

EXPERIENCE

Software Engineer, TomTom

Germany (hybrid) | May 2025 to present

Software Developer (Working Student), MediaMarktSaturn

Ingolstadt, Germany | Apr 2023 to Apr 2025

- Built and maintained internal financial operations and reporting tools in Java/Spring Boot on Google Cloud Platform.
- Set up alerting for critical system events on Google Cloud Pub/Sub.
- Automated deployments with GitHub Actions, improving GCP deployment efficiency by 15%.
- Integrated microservices and REST APIs and streamlined data pipelines with the Business Intelligence team; containerized services with Docker and Kubernetes.
- Reviewed code and mentored working students on microservice architecture.

Software Engineer (Working Student), 4.screen

Munich, Germany | Oct 2022 to Mar 2023

- Developed Java/Spring Boot microservices in the Software Development and Architecture team.
- Reduced latency by 10% by tuning Hibernate/JPA and optimizing PostgreSQL queries.
- Monitored performance with Grafana; worked with Microsoft Azure and SQL Server; wrote unit tests with JUnit and Mockito.

Software Engineer, SRE, Soroco

Bangalore, India (hybrid) | Nov 2021 to Apr 2022

- Built and operated automation systems in AWS for Amazon as the client, raising automation efficiency from 70% to 86%.
- Remediated software-assurance risks, fixed defects and led root-cause analysis for client issues.
- Python, Pandas, Django, PostgreSQL; AWS RDS, CloudWatch, EC2, S3, SQS, VPC, IAM.

Software Engineer, SayOne Technologies

Kochi, India (hybrid) | Aug 2019 to Nov 2021

- Earliest engineer on eTailPet Sellit, a cloud point-of-sale SaaS: helped design its microservice architecture and built the cart, checkout, authentication and gateway services (Spring Boot, Zuul, Redis, PostgreSQL, AWS).
- Designed the database and REST APIs for Bookit, a microservice-based appointment-booking system.
- Built an analytics platform over multi-tenant PostgreSQL data with AWS Athena and QuickSight.
- Led project planning and architecture reviews with the CTO; interviewed and onboarded new hires across 4 projects.

SELECTED PROJECTS

Cattle-farm management platform, M.Sc. thesis (hand-built)
Four Spring Boot microservices (data ingestion, anomaly detection, simulation, front end) over farm sensor data, with SmartSPEC what-if simulation, Docker Compose and Metabase dashboards. A companion simulator, SimCattle, adds polyglot services (Python, Go, JavaScript) behind a gateway with Kubernetes manifests.

Cashflow Atlas, personal finance platform (AI-assisted)
Spring Boot 3 / Java 21, PostgreSQL, Flyway. About 9,000 lines of Java: bank and broker imports, live portfolio prices every 10 s, tax archive, Prometheus/Grafana metrics, a backtesting bench for 7 strategies with costs and German tax, and a Spring AOP job-tracing pipeline.

Agent engineering harness and Decision Atlas (AI-assisted)
Multi-agent development setup on Claude Code: 8 role-based agents with scoped permissions, one git worktree per task, hooks, MCP servers, and verification against real renders. Decision Atlas maps decision records, open items and live agent sessions across 15 repositories.

Code Atlas, terminal code editor (AI-assisted)
About 24,500 lines of Rust (ratatui, tree-sitter): IntelliJ-style editing, 20+ language grammars, a custom JSON-RPC LSP client, git review and a built-in terminal. Code: github.com/kevin123george/code-atlas

Home lab platform (AI-assisted)
10+ self-hosted production services on Docker with Tailscale networking, Prometheus/Grafana monitoring, nightly backups and a self-hosted Forgejo git forge. Also an automated AI video pipeline (Tech in 60) and a three.js 3D browser game, Little Bamberg (github.com/kevin123george/little-bamberg).

SKILLS

Languages: Java 21, Python, TypeScript, JavaScript, Kotlin, Rust, SQL, Bash

Backend: Spring Boot 3, Spring Cloud, microservices, event-driven architecture, REST, GraphQL, JPA/Hibernate, Flyway, Micronaut, Django, FastAPI

Data: PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Elasticsearch, BigQuery, AWS Athena

Cloud and DevOps: AWS, GCP (Cloud Run, Pub/Sub, GKE), Azure, Docker, Kubernetes, GitHub Actions, Jenkins, GitLab CI, Prometheus, Grafana, Linux

Testing: JUnit, Mockito

AI engineering: Claude Code, MCP, agent orchestration, hooks, context design, Ollama

EDUCATION

M.Sc. International Software Systems Science, Otto-Friedrich-Universität Bamberg
2022 to 2025

B.Tech Computer Science and Engineering, Dr. A.P.J. Abdul Kalam Technical University, India
2015 to 2019 | Graduated top of class | Published paper: Research on a Virtual Assistant based on TensorFlow (IJSIET, 2019)

LANGUAGES AND ACHIEVEMENTS

English (fluent), Malayalam (native), German (basic)

State champion, TCS IT Wiz 2014 | IBM Data Science Professional Certificate
